

IFR Welding Protection for Cold Weather Work (Outer Layer)

Barn Coats

Specifications for the Barrweld Family of fabrics as well as the Arcweld fabric can be found at the back of this portfolio.

When your personnel must weld outside in the cold weather, not only do they need to be protected from the hazards of the job, but from the elements as well.

Tri-Star Glove barn coats for welding protection are perfect for the job when weld splatter is a threat.

Proudly made
in the USA

Product Description

- The outer layer is constructed using 8.5oz HRC1 inherent flame resistant (IFR) Barrweld™, which is an intimate blend of 60% Lenzing FR™ and 40% Twaron®. The fabric is tightly woven to create a smooth surface and engineered to shed weld spatter and resist pin holes.
- Inside is a warm, soft layer of 10.75 oz HRC2 navy fleece.
- Since the protective properties are inherent to the fibers of the fabric, they cannot be laundered out over the life of the garment, and will not burn, melt, or drip.

Will Not Burn, Melt, or Drip.

- These barn coats are very comfortable and comfort equals compliance.
- The 360° collar provides critical protection from weld splatter as well as those blustery winds.
- Two inside chest pockets are big enough for most cell phones.
- The black Twaron® knit wrist with thumb hole provides cut protection (A2) and locks the sleeve in place so it does not ride up the arm and expose the wrist to hazards or weather.

TSG-1085 Barrweld™ Wine

Tri-Star Glove customizes garments for your industry needs.
