

# Cut Protection

## TSG-785 Cape Sleeve for TMMTX Stamping Department

**Sleeve Data**  
**ASTM F2992-15**  
**ANSI/ISEA Cut Level A2**  
**518 grams**  
Based on third-party testing

Proudly made  
in the USA

### Description:

This body of this cape is constructed with a 5.7 oz ultra-lightweight, breathable hi-vis yellow modacrylic/aramid blend mesh. It is designed to keep the team member cool while ensuring the protective sleeves remain up and in place.

The lightweight jersey sleeves are made with 100% virgin Natural Twaron® for cut protection.

The knit wrists are made using a Twaron® blend with thumb holes. The thumb hole locks the sleeve in place when donning a glove to eliminate exposing the vulnerable wrist.

Each fabric chosen to make this cape is inherent flame resistant (IFR) which means the protective properties are inherent to the fiber and won't burn, melt, or drip, nor will the protective properties launder out over the life of the garment.

The color of the state of Texas in the TMMTX Logo denotes the size of the garment. Please refer to the backside of this marketing sheet for details.

This cape is launderable, providing cost savings opportunities. Laundry instructions are available upon request.

### Recommended:

For many years, the TSG-785 is has proven to be best practice for the demanding conditions of an automotive Stamping Department.
